

NEW HOME CONSTRUCTION REBATES

New Home Construction Energy Efficiency Rebates

Planning your new home with energy efficiency in mind will save you money now and years into the future.

1. Start by contacting one of our efficiencyPEI partners for a building plans assessment.
2. After the building plans assessment, use their recommendations in your new home construction.
3. Get a follow-up assessment after you build your home.

Depending on the efficiency of your new home, you could receive **up to thousands of dollars in rebates** from efficiencyPEI.

efficiencyPEI covers most of the cost of your building plans assessment, so it only costs you \$99 + HST.
